

# ProNET: Psychosis Risk Outcome Network

*Assessment and identification for young  
people at-risk for mental illness*

**The ProNET study is recruiting young people who are concerned about  
the possibility of developing psychosis**

**You may be eligible for this study if you meet the following criteria:**

- Ages 12-30
- Noticing a recent change in thinking, behavior, or experiences, such as:
  - Confusion about what is real or imaginary
  - Feeling not in control of your own thoughts or ideas
  - Feeling suspicious or paranoid
  - Having experiences that may not be real, such as hearing sounds or seeing things that may not be there
  - Having trouble communicating clearly

Most people who have these symptoms do not go on to develop psychosis. We are trying to understand why some people have these experiences do develop psychosis while many others do not.
